

CC 6000

DCS 6000 Blank Chip Card

Configuration

CC 6000

The CC 6000 Chip Card is a blank credit card sized memory card that brings another level of sophistication to the conference. When using chip cards each delegate has to introduce his/her chip card in the delegate unit before being able to participate in the conference. Optionally the delegate can also be required to key in a password. A benefit from using chip cards is that in free seating mode delegates can choose any position and upon inserting the card, the system will identify them for microphone control and voting.

Delegates can either keep the chip card for the next meeting or the cards can be collected, reprogrammed and re-issued with every conference. Using chip cards requires a PC running the SW 6000 Conference Administration Application (CAA), SW 6020 Delegate Database and SW 6070 Chip Card Login Module.

Highlights

- Flexible access control to the conference.
- Flexibly assigning different authorizations to delegates.
- Identifying delegates in free seating.
- Blank cards for easy customization.

Requires

CP 6000
SW 6000
SW 6020
SW 6070
SW 6071

Used With

CU 6005	SW 6065
CU 6011	SW 6067
DC 6990 P	SW 6008
DM 6510 F	SW 6010
